Safe Work Method Statement

SWM20 Shower Room and Hand Basin Cleaning

STEP	ACTIVITY List steps/tasks to perform the activity in the actual sequence	HAZARDS Against each task list hazards that could cause injury	Level of Risk	RISK CONTROL MEASURE List control measures to eliminate or minimise risk	Level of Risk after Controls	RESPONSIBILITIES Name the person responsible (supervisor or above) to implement controls
1	Obtain equipment from storage area	Chemical contact to skin	3	Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS	3	Supervisor to ensure training and assess for competency
2	Mixing of detergent	Chemical contact to skin	3	Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS	3	Supervisor to ensure training and assess for competency
3	Cleaning showers, baths, walls and tiles	Breathing difficulties due to chemical vapors Chemical contact to skin Needle stick injuries from sharps Slip trip and fall	3	Keep doors open to allow air circulation Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS Keep area as dry as possible to avoid slips Rinse walls and fittings and dry Always ensure area is not being used prior to placing 'OUT OF SERVICE' signs Ensure signs can be seen Sign not to present a trip hazard	3	Supervisor to ensure training and assess competency
4	Cleaning hand basins	Needle stick injuries from sharps Chemical contact to skin Slip, trip and fall	3	Wear protective gloves Review SDS of chemicals and follow instructions for use,	3	Supervisor to ensure training and assess competency

STEP	ACTIVITY List steps/tasks to perform the activity in the actual sequence	HAZARDS Against each task list hazards that could cause injury	Level of Risk	RISK CONTROL MEASURE List control measures to eliminate or minimise risk	Level of Risk after Controls	RESPONSIBILITIES Name the person responsible (supervisor or above) to implement controls
				including protective equipment Avoid water or detergent splashing on the floor and creating a slip hazard		
5	Cleaning stainless steel sinks, taps and fittings	Needle stick injuries from sharps Chemical contact to skin Slip, trip and fall	3	Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS Avoid water or cleanser spilling on floor and creating a slip hazard	3	Supervisor to ensure training and assess competency
6	Cleaning mirrors	Chemical contact to skin	3	Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS	3	Supervisor to ensure training and assess competency
7	Rinsing out equipment	Slip, trip and fall Chemical contact to skin	3	Do not use too much water Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS	3	Supervisor to ensure training and assess for competency
8	Return equipment to storage area	Chemical contact to skin	3	Wear correct protective clothing – gloves and enclosed non slip footwear as a minimum Check SDS	3	Supervisor to ensure training and assess for competency

Safe Work Method Statement

SWM20 Shower Room and Hand Basin Cleaning

Step 1 – Estimate the consequences of an incident occurring

Consequence	Incident
Catastrophic	Fatality or permanent serious disability or permanent ill health
Major	Serious injury, permanent part disability, long-term illness
Moderate	Medical treatment required and several days off work
Minor	First aid treatment required
Insignificant	No injuries

Step 2 – Estimate the likelihood of an incident occurring

Likelihood	Description
Almost certain	Expected to occur in most circumstances
Likely	Will probably occur in most circumstances (ie has been known to occur, or has occurred before)
Possible	Might occur at some time (ie have heard of it happening)
Unlikely	Could occur, but no known instances previously
Rare	May occur only in exceptional circumstances

Step 3 – Determine the risk rating

	Catastrophic	Major	Moderate	Minor	Insignificant
Almost certain	1	1	1	2	3
Likely	1	1	2	3	3
Possible	1	2	3	3	4
Unlikely	2	3	3	4	4
Rare	3	3	4	4	4

Hierarchy of Controls

The hierarchy of controls must be applied in the order below for all identified hazards. The higher the risk score, the more emphasis should be placed on the more effective controls, such as elimination or substitution.

1. Elimination

Elimination is the most effective way of managing a risk. For example – filling in a hole to remove a trip hazard.

2. Substitution

This is the most effective way to manage a risk. For example – using a less harmful chemical.

3. Isolation / Engineering

Isolation may include limiting how many people are exposed to a hazard. For example – using noisy equipment at night time when less people are present.

4. Administrative

Examples of this kind of control include training and instruction.

5. PPE

PPE is the least effective of all the controls and should be seen as the last line of defence.
